

Always on technology for an always on floor.

Manufacturing IT and cybersecurity built for resilient, uninterrupted operations.

In manufacturing, downtime has a per hour cost that everyone in the building can quote. BCS365 supports the office, the plant network, and the boundary between IT and OT, with the coverage and field presence that multi site operations need.

WHAT THESE ORGANIZATIONS ARE UP AGAINST

- A network problem on the floor stops production, not just email.
- Legacy machine controllers cannot be patched and were never designed to be networked.
- Customers in aerospace, defense, and automotive now impose security requirements down the supply chain.

WHAT BCS365 DELIVERS

- 24/7/365 coverage aligned to production shifts
- Plant network design, segmentation, and monitoring
- IT and OT boundary security
- Legacy system isolation and compensating controls
- Multi site standards and rollout execution
- Structured cabling and onsite field services
- Backup, disaster recovery, and restore testing
- Physical security across plants and yards

STANDARDS AND FRAMEWORKS WE WORK TO

- NIST SP 800-171
- CMMC
- ISO 27001
- NIST CSF
- ITAR aware practices
- SOC 2 Type II

WHY IT MATTERS TO YOU

Downtime sells

The business case writes itself when an hour of stoppage has a known number.

Multi site growth

Plants, warehouses, and acquisitions repeat the same scope again and again.

Supply chain pressure

Customer mandates create deadlines you can plan a deal around.

SIGNALS TO LISTEN FOR

- "A network outage stopped the line last month."
- "Our biggest customer is asking about CMMC."
- "We just acquired a plant and it runs on nothing we recognize."

HOW TO BRING US IN

- Send the name and one sentence of context to your BCS365 contact
- Take 15 minutes on an opportunity huddle to confirm fit
- We join your customer call and run discovery. You lead it
- Register through AVANT as usual. Nothing commercial changes

Segmentation between the business network and the production floor is the single most common finding, and usually the most fundable first project.

Capability summary only. Exact services, coverage, responsibilities, and commercial terms are opportunity specific and governed by the executed MSA and CFS.
